oligonucleotide
Description of Artificial Sequence:
oligonucleotides, linkages between positions 1
to 18 are phosphorothioates, linkages between
positions 18 to 26 are phosphodiasters
positions 19 to 29 carry 2'-OCH3 modified ribosyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 12, Application US/09817387
Fatent No. US20010039263A1

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description

Neininger, A.M.

Sequence-specific detection of nucleic acid hybrids using a Sequence-specific detection of nybrids from non-perfect hybrids
hybrids from non-perfect hybrids

Patent: US 5871902-A 28 16-FEB-1999;

Weininger,S. and Weininger,A.M.
Weininger,S. and Weininger,A.M.
Sequence-specific detection of nucleic acid hybrids using a
DNA-binding molecule or assembly capable of discriminating perfect
hybrids from non-perfect hybrids
Patent: US 5871902-A 29 16-FEB-1999;
Location/Qualifiers

Sequence-specific detection of nucleic acid hybrids using a
Sequence-specific detection of segments of discriminating perfect
hybrids from non-perfect hybrids
Patent: US 5871902-A 38 16-FEB-1999;
